Variables: These are the names which we use to store the values.

Rules to Declare variables:

* uppercase, lowercase

* underscore

* Can pass multiple values for multiple variables.

Ex: $a, b, c = 2, 3, 4$.

Invalid Declarations:

* Doesn't start with numbers.

* — | — Special characters (except underscore).

* D — | — give space b/w 2 strings.

Input & output function:

Whenever we are taking input from the user we have to mention data types otherwise it will take it as a string even if it is integer value.

O/p fun - `print()` I/p fun - `input()`.
